

400-3300 GPM Up to 300 PSI

SERIES 323F

IMO SERIES 323F pumps are positive displacement, double-ended rotary, screw-type pumps designed and engineered for excellent suction capability over a wide range of fluid viscosities. Flow rates (400 to 3300 GPM) are proportional to rotating speed when the pump is operated within the recommended pressure range. The self-priming design permits both evacuation of air filled inlet lines and repriming if suction is lost.

The unique IMO design—only three moving parts—is the key to the SERIES 323F pump performance. A precision bored housing encases the driven screw (power rotor) and intermeshing sealing screws (idler rotors). The accurately machined idler rotors conform perfectly to the threads of the power rotor and to the housing bores, confining the fluid in a succession of closures or cavities. As the screws rotate, the fluid is moved axially from the inlet port to the outlet port in a continuous, uniform flow. This uniform axial flow results in a minimum of fluid pulsation and extremely quiet operation.

The rotating idler rotors generate a hydrodynamic film of fluid which supports the idlers in the housing

bore and prohibits wearing contact. The strength of this film is based on fluid viscosity, pump pressure and speed. As pressure requirements increase, the hydrodynamic film can be strengthened by increasing viscosity or speed. Both the flow rate and pressure capability of the IMO pump increase with speed.

The symmetrical arrangement of the rotors (screws) eliminates the need for bearings to absorb radial loads. Axial loads are balanced hydraulically within the pump.

SERIES 323F pumps are offered in four rotor sizes for foot mounted configurations. A variety of construction materials are available to meet operating conditions and job specifications. Complete pump/driver assemblies can be provided as required.

The simple design of the SERIES 323F pump permits fast, easy installation, low maintenance, and ease of repair. All wearing parts are completely replaceable. Periodic inspections can be made without removing the pump, and routine maintenance can be performed without disturbing system piping.

Applications

SERIES 323F pumps are designed to meet the requirements for a wide variety of applications including highly viscous fluids, hydraulic, lubricating, residual fuel and crude oils. These units have been widely utilized in refineries, chemical and petrochemical plants, lubricating systems and high flow pump boosting stations—wherever high performance and reliability in a rugged design are required.

Typical applications are:

Transfer of polymers, chemicals, glycols, vegetable

oils, paraffins, molasses, grease, paint, asphalt and other highly viscous and/or shear sensitive type fluids in pipelines and process systems.

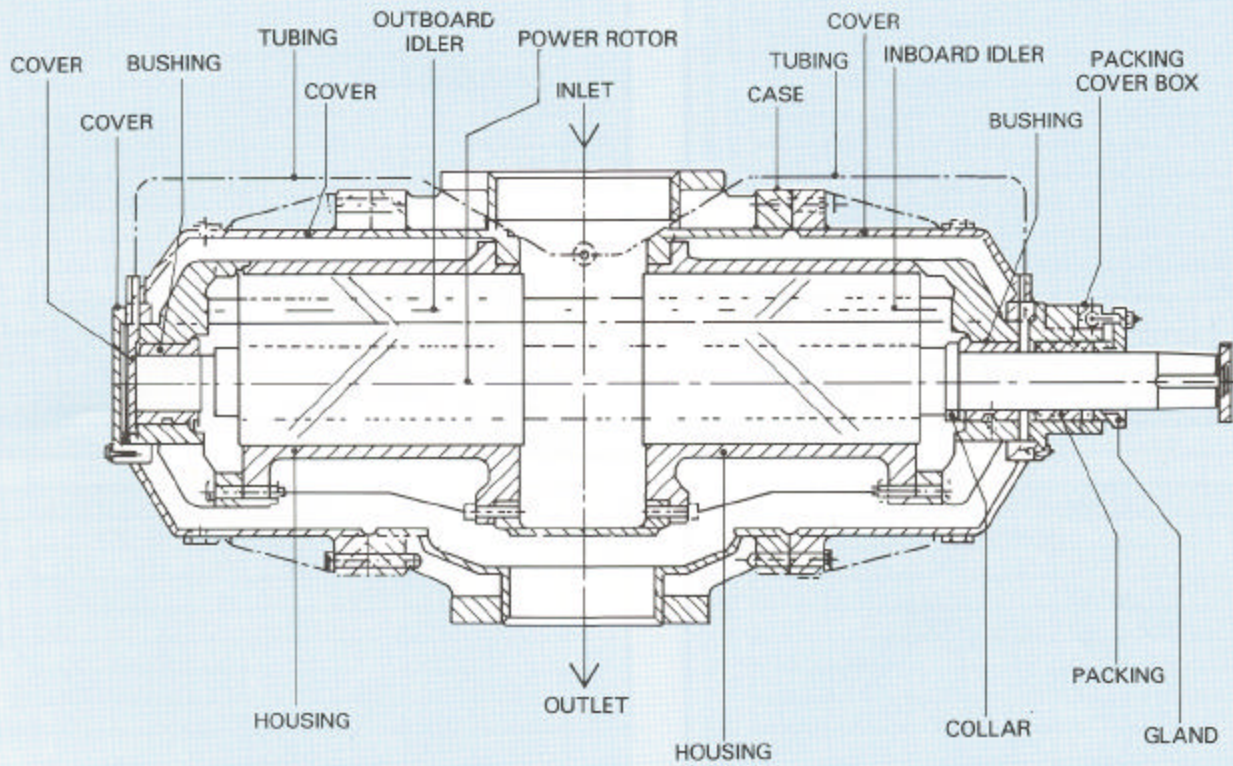

Loading and Unloading of lube, fuel, bunker, crude, waste and similar type oils in refineries, factories, storage and settling tanks.

Lubrication of diesel engines, gas turbines, steam turbines, compressors, transmission gears, large centrifugal pumps, and other rotating machinery.

Series 323F Standard Specifications and Features

CASING	High tensile gray cast iron. Optional steel casing available. Steam jacketing available on steel cased pumps (maximum 150 psig steam).	
ROTOR HOUSINGS	Cast gray iron.	
POWER ROTOR	Alloy steel.	
IDLER ROTORS	Pearlitic Nodular Iron.	
GASKETS	Cellulose and non-asbestos fiber.	
SHAFT SEAL	<p>Type P: Alternate rows of hard and soft square molded packing. For applications requiring packing.</p> <p>Type B: Buna N bellows mechanical seal with NI resist seat. For clean applications requiring a mechanical seal.</p> <p>Type H: Positive drive mechanical seal with iron seat. For higher viscosity and/or temperature and residual and crude oil applications.</p>	
DISCHARGE PRESSURE	300 PSIG Maximum. <i>40 psi minimum when viscosity \geq 100 SSU or 25 psi when $<$ 100 SSU.</i>	
INLET PRESSURE	25 PSIG Maximum.	
SPEED	1200 RPM Maximum.	
VISCOSITY	<p>Type P: 100–25,000 SSU. Recommended for residual and crude oils.</p> <p>Type B: 8.0 cst (50 SSU)–3000 SSU. Recommended for clean oils.</p> <p>Type H: 8.0 cst (50 SSU)–20,000 SSU. Recommended for viscosities over 3000 SSU and all residual crude oils.</p> <p>All Types: consult IMO for lower or higher viscosities.</p>	
TEMPERATURE	<p>Type P: 0–250°F Type H: 0–250°F</p> <p>Type B: 0–180°F</p> <p>Designs available to 500°F. Consult IMO.</p>	
DRIVE	Direct only.	
ROTATION	Clockwise facing pump shaft.	
MOUNTING	Horizontal Foot Mount. Optional vertical mounting available for certain applications. Consult IMO.	
FILTRATION	Inlet strainers are required to keep contaminants and abrasives out of pump, but they must be selected with consultation with strainer vendor to prevent pump starvation. Normally, 60 mesh for light oils and 1/8"–3/16" openings for heavy oils are recommended.	
ACCESSORIES	Steel bedplates and completely mounted pump/driver assemblies.	
WR ² (Approximate)	<u>Rotor Size</u>	<u>WR²</u>
	550 J & 550	260 lb-in ²
	630 M	990 lb-in ²
	800 J	2276 lb-in ²

Typical 323F Assemblies

Typical for models with Shaft Packing

Typical Shaft End for models with Mechanical Seals

1. For conditions between listed values, interpolate between those values. For conditions not listed or off tables, contact IMO. See page 8 for an interpolation example.
2. Net Inlet Pressure Required is minimum pressure above vapor pressure at pump inlet to prevent cavitation. This assumes that the fluid is air and gas free.
3. For BHP values at viscosities below 200 SSU, use values listed for 200 SSU.

1. For conditions between listed values, interpolate between those values. For conditions not listed or off tables, contact IMO. See page 8 for an interpolation example.
2. Net Inlet Pressure Required is minimum pressure above vapor pressure at pump inlet to prevent cavitation. This assumes that the fluid is air and gas free.
3. For BHP values at viscosities below 200 SSU, use values listed for 200 SSU.

Typical Pump/Driver Arrangement

323 F HORIZONTAL FOOT MOUNTED PUMP/MOTOR ASSEMBLY

Note: Includes pump and motor with OSHA type coupling guard and shaft coupling factory mounted on a steel baseplate (with or without dripim). Other pump/driver arrangements or variations are also available. Consult IMO.

A linear interpolation is accurate between any two adjacent numbers tabulated. Following example demonstrates how to interpolate.

Rated USGPM & BHP at 200 SSU, 265 psi

(1) 1750 USGPM - 1731 USGPM = 19 USGPM

265 psi - 250 psi = 15 psi

300 psi - 250 psi = 50 psi

$$\frac{15}{50} \times 19 = 5.7 \text{ USGPM}$$

$$1750 \text{ USGPM} - 5.7 \text{ USGPM} = 1744.3 \text{ USGPM}$$

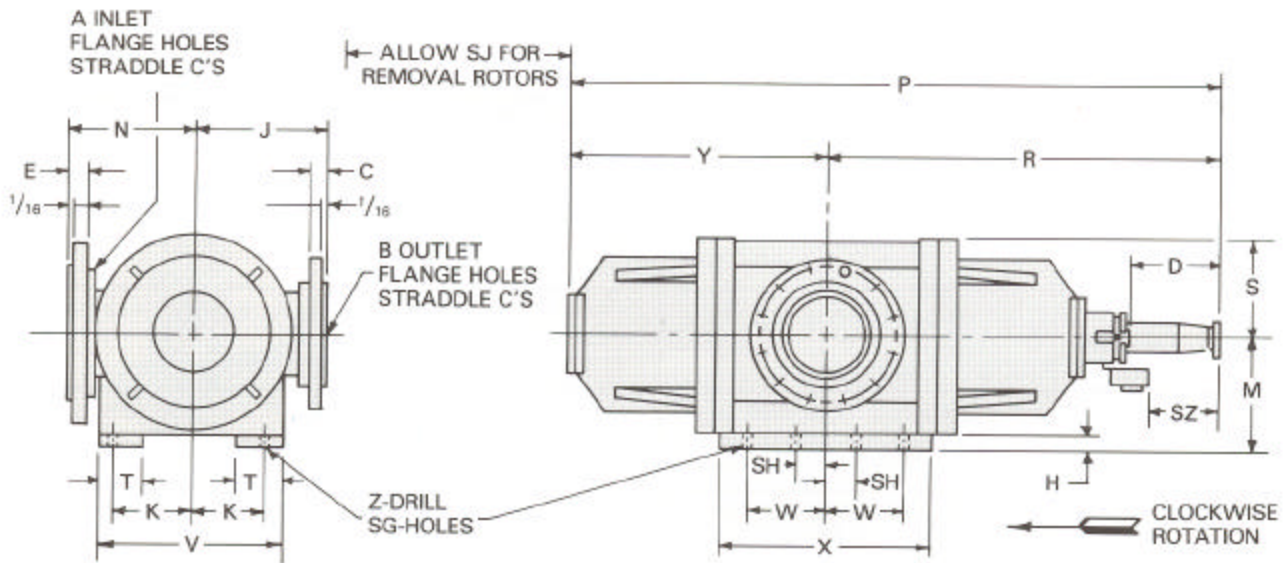

(2) 353 BHP - 297 BHP = 56 BHP

$$\frac{15}{50} \times 56 = 16.8 \text{ BHP}$$

$$297 \text{ BHP} + 16.8 \text{ BHP} = 313.8 \text{ BHP}$$

Series 323F Pump Dimensions

All dimensions are in inches.
Standard rotation : clockwise

Standard inlet and outlet position shown. Reversed inlet and outlet positions can be provided.

How To Specify IMO Series 323F Pumps

Specification	Benefit
Pump shall be untimed double end IMO rotary 3-screw design with complete radial and axial hydraulic balance and no ball or roller bearings.	Simple—only three rotating parts—rugged construction insures long life with little or no maintenance. No bearing problems—less maintenance. Long pump life due to no bending loads.
Pump shall not require lubrication or cooling.	Lower maintenance costs. Lower installation cost. No cooling water or piping expense.
Pump shall be equipped with only one suction pressure seal chamber.	Fewer seals mean reduced initial cost, reduced downtime and spare parts cost. Seal only exposed to suction pressure results in reduced load and long life.
Pump shall neither require nor include radial support bearings or timing gears.	Fewer parts leads to less maintenance, less downtime, lower initial cost.
Pump shall provide smooth, continuous flow free of pulsation and vibration.	Pulsation dampening equipment and resulting expense and maintenance are not required.
Pump shall handle complete range of viscosity and pressure as specified.	Reduces number and types of pumps required—lower installation cost. Highly predictable and uniform operating characteristics allows for more installation flexibility.
Pump shall be self priming and capable of evacuating air filled inlet lines.	Allows more installation flexibility with lower installation cost.
Pump shall employ unmatched rotor sets.	Damage to one rotor does not mandate replacement of all rotors—lower repair costs.
Pump shall be equipped with replaceable rotors and rotor housings with separate non-wearing case.	Complete field reparability—less downtime and repair cost without need for factory-based overhaul. Separate non-wearing case is an added safety feature.
Each pump shall be full load tested prior to shipment.	Assures user that pump will provide trouble-free operation.
Pump noise shall be 80 dBA (or below) sound pressure level overall at three feet.	Meets OSHA requirements. Costly noise abatement equipment not required. Increases employee productivity.
Pump shall be furnished with standard full twelve months warranty.	Assurance of a reliable product completely backed by Imo Delaval.

Viscosity Conversion Table

The following table will give a comparison of various viscosity ratings so that if the viscosity is given in terms other than Saybolt Universal, it can be translated quickly by following horizontally to the Saybolt Universal column.

Saybolt Universal Viscosity SSU	Kinematic Viscosity Centistokes	Saybolt Furol	Seconds Redwood (Standard)	Seconds Redwood 2 (Admiralty)	Degrees Engler	Degrees Barbery	Seconds Parlin Cup #7	Seconds Parlin Cup #10	Seconds Parlin Cup #15	Seconds Parlin Cup #20	Seconds Ford Cup #3	Seconds Ford Cup #4	Approx. * Kinematic Viscosity (in centistokes) = $\frac{\text{Absolute viscosity (in centipoises)}}{\text{Specific Gravity}}$

Above 300 SSU, use the following approximate conversion
SSU = Centistokes x 4.635

Above the range of this table and within the range of the viscosimeter, multiply their rating by the following factors to convert to SSU.

Viscosimeter	Factor	Viscosimeter	Factor	Viscosimeter	Factor
Saybolt Furol	10	Parlin cup #15	98.2	Mac Michael	1.92 (approx.)
Redwood Standard	1.095	Parlin cup #20	187.0	Denmler #1	14.6
Redwood Admiralty	10.87	Ford cup # 4	17.4	Denmler #10	146.
Engler Degrees	34.5			Stormer	13. (approx.)

Typical 323F Nomenclature

Examples:

- 323FPF-550J (323F pump with standard shaft packing, foot mount, cast iron casing, rotor size 550J)
- 323FBFS-630M (323F pump with Buna N bellows mechanical seal, foot mount, steel casing, rotor size 630M)
